Dynamic IT student with hands-on experience in web development, data management, and software development. Experienced in building user-centric applications and tools, including a travel expense management web app and a browser extension for price comparison. A beginner in React.js, actively solving DSA questions on competitive programming platforms, and continually exploring emerging technologies to enhance technical expertise and contribute to impactful projects.

Projects

Travel treasury

- Designed and developed a web application to manage and distribute travel expenses among friends or colleagues. The app supports seamless expense tracking, splitting, and generating summaries for better financial management.
- Technologies used: HTML, CSS, JavaScript (front end), Node.js (back end), MongoDB

Research Projects in Machine Learning

- Regression Models: Conducted research on various regression algorithms to predict numerical outcomes, improving model accuracy through feature engineering and hyperparameter tuning.

Price Comparision extension in python

- Developed a Python-based browser extension for comparing product prices across Flipkart, Amazon, and Snapdeal using web scraping with BeautifulSoup and MongoDB.
- Features real-time price comparisons and historical price tracking with a user-friendly interface.

Skills

• C++ • Java • DSA • Html & Css • Javascript • MongoDB • SQL • Python • React js • Git & Github

Education

MAY 2019

SSC | S.O.D.M.V. Sengaon | 94.20%

MAY 2021

HSC | Swami Vivekanand jr college Jintur | 93.50%

EXPECTED GRADUATION: 2025

Bachelor of Technology (B.Tech) in Information Technology | SGGSIET Nanded | 7.89
